

Wisconsin Creative

Notes for App Review (version 1.0, build 18)

Thanks for taking a look at Wisconsin Creative. It's an internal gear and scheduling app for the Wisconsin Athletics Creative team: the staff and student photographers and videographers who cover Badger athletics. We're requesting unlisted App Store distribution because the app is only useful to our own team; there's nothing in it for the general public.

The basics

App name	Wisconsin Creative (Home Screen label: Creative)
Bundle ID	com.erikrole.Wisconsin
Version / build	1.0 / 18
Distribution	Unlisted; shared by direct link with our internal team only
Privacy policy	https://wisconsincreative.com/privacy

Who uses it, and how access works

Every user has an account we create for them; there is no public sign-up. Staff and students use the app to reserve cameras and lenses, keep track of what they have checked out, and see their upcoming shoots. Once unlisted distribution is approved, the app will only be reachable by a direct App Store link that we share internally.

One note: we also run a separate kiosk build in our equipment room that handles physical pickups and returns. That build is not part of this submission.

Signing in

Demo email	appreview@wisconsincreative.com
Password	In the App Store Connect review notes
Sample gear codes	DEMO-CAM-001, DEMO-LENS-001, DEMO-AUDIO-001, DEMO-BATT-1

The demo account is seeded with fake records, so nothing you do with it touches real staff or student data.

A reasonable path through the app

- **Home** shows anything due back soon and your next scheduled work.
- **Bookings / My Gear** lists active and upcoming reservations. Try creating one: search for an item, pick dates, review, and submit.
- **Search** (or manual entry on the Scan tab) works with the sample codes above, e.g. DEMO-CAM-001.

- **Schedule** shows upcoming events with their linked gear and call times, plus open shifts a student can claim.
- **More** holds the item catalog, guides, license records, and the user directory.

If the app asks for notification permission, allowing it lets you see return reminders and the Live Activity countdown that runs while gear is checked out.

Privacy and permissions

- Camera access is used only to scan gear barcodes and QR codes.
- Notifications and Live Activities are used for return reminders and schedule updates.
- The app never asks for location. The weather shown on event screens comes from WeatherKit using fixed venue coordinates.
- No tracking, no third-party ads or analytics.
- Networking is standard HTTPS/TLS; export compliance is declared accordingly.

If anything gets in the way

If sign-in fails or anything else blocks the review, reach us at appreview@wisconsincreative.com or through the contact info in App Store Connect and we'll sort it out quickly. Apple's unlisted distribution program is described at <https://developer.apple.com/support/unlisted-app-distribution/>.
